Introducing

THE SUBTRACKT

Beneath the surface sits the Subtrackt collection. This structural cove lighting system is designed to seamlessly integrate into the architecture. An extremely versatile recessed system allows for optimal customization with optional single or dual channels to line your ceiling in a linear formation or u-shaped design. The modules have four specific ways to rotate and adjust, offering additional angles for a larger range of directional illumination with its special arm design.

The modern design of this channel lighting establishes ease of installation by incorporating a mounting rail with continuous grooves to support a notched design below the modules to clamp on. This allows you to slide the modules onto the rail and place lighting where needed. Subtrackt darkness from your room and brighten your space today with the next generation of channel lighting.

CKT

ALUMINUM CHANNELS

Subtrackt heads are built to provide multiple types of light. This all-in-one design offers illumination for general and task lighting purposes. Choose between two modules for a tighter, stronger beam or a softer, wider ray of light. Employing multiple joints, the arm pivots at various intersections for complete control. This also allows for absolute adjustments to create the perfect position while the aluminum channel is neatly hidden within the designated recessed space. The non-invasive design supports all adjustments to be made behind the scenes within the ceiling alcove to avoid exposing the body or channel. This is ideal for confined spaces or where false ceilings must be used.

NEXT GENERATION COVE LIGHTING

Specific to the Subtrackt collection is a versatile arm design, allowing for ample motion with four ways to rotate and adjust the position for specific lighting requirements. Depending on the rotations and adjustments made, the type of light received will change accordingly. The mounting options also allow for further lighting specifications to produce exact illumination or a wall wash effect if needed.
